Major Features:

- TRT-2 provides a smooth balanced operation. Even with large electric tools.
- Torque reaction and down pressure are eliminated.
- Positive screw extension allows easy engagement of the screw into the work.
- Screw thrust is controlled by the operator. The arm has no "Kick Back" when screws are driven into the work.
- Rigid construction with ball bearings on all joints allows easy movement over a large work area.
- Optional encoders are available to verify the position of a fastener as it is driven. Tightening sequences are guaranteed.
